

Clarifications for the EVA 2023 Data Challenge

February 20, 2023

Description in Section 2.2, Paragraph 2

In the description of the environmental variables we write **V1,V2,V4,V5**, but it should be **V1,V2,V3,V4** as presented in the data files.

Description in Section 2.2, Paragraph 1

The original description in Section 2.2 read “...*the distributions of the environmental variables can be assumed independent and identically distributed...*”. This statement is not entirely correct. The distribution of the variable **V3** depends on the variable **Season**, but observations are indeed independent. The statement is true for variables **V1,V2,V4, Wind Speed** and **Wind Direction** as presented in the data files.
